Description:

The BMTCN® Certification Review Manual is an essential resource for RNs preparing to take the blood and marrow transplant certified nurse (BMTCN®) examination. Chapters are based on the BMTCN® Test Content Outline and covers eight major subject areas; basic concepts and indications for transplantation, types of transplants and sources of stem cells, pretransplant care, preparative regimens and stem cell infusion, prevention and management of graft-versus-host disease, post-transplant issues, survivorship issues, and professional practice. Each chapter includes a series of multiple-choice study questions similar to those found on the Oncology Nursing Certification Corporation BMTCN® examination. As the only nationally accredited test of its kind, the BMTCN®

certification identifies nurses as being adept in the specialty of blood and marrow transplantation. This study manual is an essential learning resource for your certification preparation.
